

How to Correctly Wrap Your Laptop Charger Cord

Leave some **slack** at each end where the cord enters the power block.

Do **NOT** wrap the power cord tightly around the AC adaptor as this can cause the wires to split or snap where it enters the AC adaptor.

Do **NOT** allow the AC adaptor to hang from the computer (as pictured below) as this can cause the DC Jack on the computer to break.

Do **NOT** put any pressure on the AC adaptor connector or the DC Jack as this can damage the AC adaptor or the computer or both.
